Balance Systems

Double and single hungs are equipped with a balance system. It not only allows you to tilt the sash out to clean, but it is key to a user-friendly experience when operating. The system is made up of the main mechanism (coil or spring) and a pivot shoe. There are two options available for the balance system when ordering. The block and tackle system is a standard for new construction while the constant force coil system is standard in replacement windows.

Comparison Chart	Block & Tackle Balance	Constant Force Balance
Interchangeable in 7000 series windows	✓	✓
Balance cover included		✓
Smaller EGRESS size	✓	
Easily Replaceable with screwdriver	✓	✓
6000 Series ONLY		✓

The smaller sash stop at the top of the balance allows for a smaller EGRESS size on New Construction. (ex. 37 5/8 x 57 meets EGRESS)

Balance covers for Constant Force hides the coil balance inside the channel for a clean & sleek finish.

There is an instructional [video](#) on how to replace them www.7Dindustries.com > Video Library > Replacing balance
